2016 V-Strom 1000 ABS Adventure

DL1000AAL6

PGZ: Metallic Matte Fibron Grey

Introduction

- With the V-Strom 1000 ABS* Adventure, you can conquer city traffic as easily as you scale mountains. It has a fuel-injected, V-twin engine tuned for incredible low-end and mid-range torque. It is also the first Suzuki to come equipped with traction control*, a key to its versatile performance. It's loaded with accessories that help you tackle any terrain, including hand-guards, a touring windscreen and side-mounted cases. A reliable machine that is All Adventure, No Compromises.

Key Features

- 1037cc, fuel-injected, 90-degree, V-twin engine
- Suzuki's Traction Control System
- Anti-Lock Brake System (ABS)
- Tokico 4-piston monobloc front brake calipers with 310mm floating-mount dual discs
- Adventure Accessories – Side cases, Touring windshield, Accessory bar, Hand guards

Engine Features

- The four-stroke, liquid-cooled, DOHC, 1037cc 90-degree V-twin engine is designed to deliver outstanding performance across the entire powerband. This broad capability is necessary to take on the road surfaces that riders encounter during long-distance tours, such as congested urban streets, stone-strewn roads, high-speed highways and twisting, winding roads.
- Pistons were engineered with use of FEM analysis to achieve ideal rigidity and weight.
- Suzuki Composite Electrochemical Material (SCEM)-plated cylinder bores are integrated into the upper crankcase for low weight, increased durability, reduced friction and excellent heat dissipation.
- The EFI system employs 10-hole injectors on each throttle body to improve fuel atomization for superior combustion efficiency and frugal fuel consumption.
- Twin throttle bodies with Suzuki Dual Throttle Valve (SDTV) system contribute to better throttle response and torque at the low-to-mid RPM range, while still producing peak performance.

- Advanced 32-bit ECM also operates the Automatic Idle Speed Control (ISC) which improves cold starting and stabilizes the engine idle.
- The single-silencer exhaust configuration reduces weight and has a lower center of gravity to enhance handling and maneuverability.
- Suzuki Exhaust Tuning (SET) servo-controlled butterfly valve helps enhance torque, response and acceleration, especially at low-to-mid rpm range.
- The Suzuki Pulsed-secondary AIR-injection (PAIR) system injects fresh air into the exhaust ports while the exhaust is fitted with a large-volume catalyzer that enables the bike to satisfy a variety of US and international emission standards without sacrificing any performance.
- State-of-the-art transistorized digital ignition system contributes to a more complete combustion by igniting the mixture at the ideal moment.
- Twin iridium type spark plugs are fitted to each cylinder to provide a more condensed and hotter spark yet last longer than convention plugs.

- The output of the six-speed, close-ratio transmission is managed by the Suzuki Clutch Assist System (SCAS). This system works like a slipper clutch by allowing a small amount of clutch slip to enable smooth down shifts. It also works as an assist clutch to make the lever easier to pull.
- Suzuki's debuted its first motorcycle traction control system on the V-Strom 1000 ABS, which enables the rider to control the throttle with more confidence in a variety of riding conditions.
 - o The traction control system continuously monitors front and rear wheel speeds, throttle opening, engine speed, and transmission gear. It quickly reduces engine output when it detects wheel spin by adjusting ignition timing and air delivery.
 - o The rider can select one of three modes (1, 2, and OFF). Modes 1 and 2 differ in terms of sensitivity. Mode 1 has lower sensitivity; it allows a certain degree of rear wheel spin for good road conditions. Mode 2 has higher sensitivity; the system engages traction control sooner and is for poor road conditions.
- The charging system uses a durable, three-phase stator with an open-style regulator/rectifier that reduces mechanical drag and heat while producing higher output at lower engine speeds.

Chassis Features

- The advanced chassis is the foundation of a compact, lightweight adventure-ready package that provides comfort and enjoyment to a variety of riders.
- Seat and fuel tank joint creates a slim cockpit thanks to the narrow V-twin engine design, enabling the rider legs to reach to the ground easier than other models in the class.
- The aluminum, twin-spar frame was designed with the latest FEM analysis technology. It is stiffer and 13% lighter than that of the previous generation V-Strom.
- 43mm KYB inverted front forks provide a sporty yet plush ride in diverse conditions. The front forks have fully adjustable spring preload plus compression and rebound damping force.
- The single-shock, link-style rear suspension features rebound damping force adjustment plus remote, hand-operated spring pre-load adjuster.
- Tokico mono-block front brake calipers are mated with 310mm floating-mount dual discs for strong braking performance.
- Standard anti-lock brake system (ABS) monitors the wheel speeds 50 times per wheel rotation to match stopping power to the available traction.
- Lightweight 10-spoke cast-aluminum wheels (manufactured for Suzuki by Enkei) combine nimble handling with sporty looks.
- Taller and wider than the standard model, the touring height- and angle-adjustable windscreen was carefully shaped through extensive wind-tunnel testing to reduce wind noise and rider fatigue. The angle is easily adjusted by hand.
- The instruments include an analogue tachometer and a brightness-adjustable LCD speedometer. LCD readouts include an odometer, dual trip meters, the gear position, the coolant and ambient temperatures, the voltage, the riding range, the average fuel consumption, the instantaneous fuel consumption, the traction control mode, a fuel gauge, and a clock.
- The rider can switch between traction control modes and LCD readings using the left handlebar switch.
- 12V DC outlet is conveniently located below the instrument panel. The SAE socket is ideal for powering a GPS unit or charging mobile devices.
- To emphasize Suzuki's heritage, the bike's front fairing and beak reflects design cues from the 1988 DR750S, Suzuki's first adventure touring motorcycle.
- The bright, halogen headlights have the distinctive vertical configuration seen on the Hayabusa and GSX-R sportbikes.
- Rear tail and brake light uses LEDs, which offer higher visibility and greater durability than bulbs.
- The seat is shaped for comfort and to allow riders to easily put their feet on the ground. The side walls of the seat have a high-grip texture for strong hold.
- Matching, quick-release side cases have lock tumblers that match the bike's ignition key so you have the convenience of one-key operation.
- Strong, steel accessory bars also offer an excellent mounting point for other optional items, like driving lights.
- Hand guards offer additional element protection for the rider's hands.
- Under cowl not only adds style but keep road grime away from the bottom of the engine (and oil filter service area).

Additional Features

- A variety of Genuine Suzuki Accessories for V-Strom owners are available including a large selection of Suzuki logo apparel.
- 12-month limited warranty

** Depending on road surface conditions, such as wet, loose, or uneven roads, braking distance for an ABS-equipped vehicle may be longer than for a vehicle not equipped with ABS. ABS cannot prevent wheel skidding caused by braking while cornering. Please drive carefully and do not overly rely on ABS.*

**The traction control system is not a substitute for the rider's throttle control. It cannot prevent loss of traction due to excessive speed when the rider enters a turn and/or applies the brakes. Traction control cannot prevent the front wheel from losing grip.*

Fuel / Oil / Fluid Recommendation

Fuel

NOTICE

Do not use leaded gasoline. If it is used, the engine and the emission control system will be damaged.

Use unleaded gasoline with an octane rating of 90 AKI or higher.

Unleaded gasoline containing up to 15% MTBE by volume may be used.

Unleaded gasoline containing up to 10% ethanol by volume may be used.

Unleaded gasoline containing up to 5% methanol by volume may be used if it contains appropriate co-solvents and corrosion inhibitors.

Engine Oil

Use engine oils which meet the following requirements.

- API service classification: SG or higher
- JASO T903 standard: MA
- Viscosity: SAE 10W-40

If SAE 10W-40 engine oils are not available, select oils of an appropriate viscosity grade according to the following chart.

Suzuki does not recommend the use of engine oils which have an “ENERGY CONSERVING” or “RESOURCE CONSERVING” indication in the API service symbol for any of its motorcycles / ATVs. They can affect the engine life and the clutch performance.

Suzuki recommends the use of SUZUKI PERFORMANCE 4 MOTOR OIL.

Brake Fluid

Specification and classification: DOT 4

⚠ WARNING

Since the brake system of this motorcycle is filled with a glycol-based brake fluid by the manufacturer, do not use or mix different types of fluid such as silicone-based and petroleum-based fluid for refilling the system, otherwise serious damage will result.

Do not use any brake fluid taken from old or used or unsealed containers.

Never reuse brake fluid left over from a previous servicing, which has been stored for a long period.

Engine Coolant

Suzuki recommends the use of SUZUKI LONG LIFE COOLANT or SUZUKI SUPER LONG LIFE COOLANT.

Coolant

(SUZUKI LONG LIFE COOLANT (GREEN))

Coolant

(SUZUKI SUPER LONG LIFE COOLANT (BLUE))

If SUZUKI COOLANT is not available, use an anti-freeze/engine coolant compatible with an aluminum radiator, mixed with distilled water only.

Front Fork Oil

Use SUZUKI FORK OIL L-01.
