Features & Specifications 2018 RM-Z450

Key New Advancements

Increased Engine Performance

Improved Throttle Response with Higher Peak Power Evolved Traction Management System Helps the Bike Hook Up Updated Suzuki Holeshot Assist Control (S-HAC) Gets You Out Front

Advanced Cornering Performance

New Frame and Swingarm are Lighter with Excellent Strength Refined Chassis Dimensions Blend Nimble Handling with Stability Improved Coil-spring Fork Provides Great Performance and Easy Tuning New Showa BFRC Rear Shock Delivers Remarkable Damping Response Bridgestone X30 Tires bring Outstanding Grip

Improved Braking Performance

Larger Front Brake Increases Stopping Power and Feel

New, Compact Rear Master Cylinder is out of the Way of Mud and Boots

Functional Styling

Aggressive New Styling Blends Function with Suzuki Character Narrow Cockpit Lets Rider Move with Ease for Maximum Racing Performance

Overview

Developed using Suzuki's RUN, TURN, and STOP philosophy that creates a Winning Balance between engine and chassis performance, the 2018 RM-Z450 has stronger brakes for better stopping power, a wider spread of engine muscle with higher peak power, and a frame that is stronger and lighter resulting in a nimble chassis that elevates the standard for cornering performance.

Engine Features

- New 449cc liquid-cooled 4-stroke, 4-valve DOHC engine is the latest incarnation of Suzuki's proven and reliable, fuel-injected powerplant
- The engine has higher peak horsepower with more torque at lower engine speeds for improved throttle response through the entire rev-range
- The cylinder head intake port shape is changed to tumble flow the fuel/air mixture by 25% to help increase power output.
- A 30% larger air cleaner opening is combined with a more direct air cleaner outlet tube path to the throttle body to increase air flow.
- Advanced fuel-injection system makes for extra-smooth power delivery, high fuel efficiency, and superb reliability.
- The RM-Z450 has a new, Suzuki-unique throttle body design with a relocated fuel injector fed by a new, higher-pressure fuel pump directly sprays fuel at the butterfly valve to improve atomization of the fuel/air charge.
- The new throttle body design eliminates complex control linkage so the rider feels a more direct connection to the engine.
- The intake camshaft profile is changed, including more valve lift that the prior model, increasing power at all engine speeds.
- The compact aluminum cylinder is finished with Suzuki Composite Electrochemical Material (SCEM) coating for durability, light weight and efficient heat transfer.
- The piston's casting is ungraded to include strengthening ribs near the wrist pin bosses to match component reliability to the higher horsepower.
- Engine starting is simple and efficient due to a long kick starter lever, refined internal gears, larger air cleaner and breather system, plus an automatic decompression system that works precisely and efficiently (eliminating the need for a heavy and costly electric start system).
- The high-flow exhaust system complies with AMA sound regulations.
- New engine protectors help guard the coolant pump (on the right) and the stator cover (on the left) from debris and stones.

Advanced Electronics Features

- The 2018 RM-Z450 features an evolved and faster traction management system. The Electronic Control Module (ECM) continually measures throttle opening, engine speed and gear position and then adjusts the ignition timing and fuel injector duration to fine-tune the engine output to deliver the best traction for the riding conditions.
 - o The RM-Z450's traction management system is different from a street-bike traction control system as it does not measure rear tire spin. Because the needs of a motocrosser are different than a street bike, this system offers constant adjustment that maximizes traction at all times.
- The Suzuki Holeshot Assist Control (S-HAC) is a selectable launch system derived from the factory race bike to help riders' takeoff from the starting gate for an early lead. There are three modes riders can choose for the best option per their skill level and starting conditions. There are three stages to the A- and B-Modes of the S-HAC system. This helps riders at the moment of launch, when crossing the gate, and through acceleration up to the full-speed. The S-HAC settings for A-Mode on the 2018 RM-Z450 are updated to aid the rider's throttle control during launches.
 - o A-Mode: For hard surfaces or slippery conditions at the starting gate. In this mode, S-HAC alters ignition timing at the moment of launch and the ride over the gate to reduce wheel slip to deliver a smooth take off. It also advances ignition timing during this sequence for stronger acceleration. After 1.2 seconds or when you reach third gear, the system shuts off and returns to normal ignition timing.
 - o Benefit of A-Mode: For novice riders, and/or hard and slippery traction conditions, use A-Mode for a more controlled launch.

- o B-Mode: When conditions at the starting gate have better traction, and a more aggressive launch is desired. S-HAC will advance the ignition timing to allow increased throttle response and stronger acceleration off the line. The ignition timing alternation is in a similar sequence as A-Mode, but with increased overall timing. One of three conditions will return the ignition to normal operation (whichever happens first): After 4.5 seconds has passed since throttle opening, or when you shift to 4th gear, or when the throttle is closed.
- o Benefit of B-Mode: For skilled riders, and/or good starting conditions, use B-Mode for a more aggressive launch.
- o Base Mode: Standard power launch, no action required on the S-HAC switch.
- Designed for motocross-use, the lightweight, battery-less, electronic fuel injection system is key to the engine delivering efficient power.
- · Easy-to-use Fuel Couplers are included to simplify EFI tuning
 - o For quick fuel adjustments to suit riding conditions, two couplers are provided. One is for rich and another for lean fuel setting compared to stock setting. Riders can change fuel settings in seconds by simply connecting either coupler to the wire harness.

Transmission & Drive Features

- Refined 5-speed transmission enables precise gear shift operation. The transmission feel has been improved with a precisely machined shift cam for accurate gear selection. Specialized machining processes also increase the precision of the matching gears.
- The multi-plate, wet-clutch uses rack & pinion clutch release mechanism for precise feel of the engagement and disengagement points while riding.
- The new, lighter-weight chain guide is shaped to accurately route the drive chain smoothly.

Chassis Features

- The 2018 RM-Z450 features a new frame and swingarm design that continues the Suzuki's reputation as the best handling motocrossers available.
- The new aluminum-alloy twin-spar frame combines cast and extruded sections to achieve superior front-and-rear weight distribution while balancing strength and weight.
- The new frame is 700 grams (1.32 lbs.) lighter to improve cornering performance and shock absorption while delivering stable handling.
- The new swingarm is assembled with thinner materials for 100 grams (0.25 lbs.) lower weight while cornering performance and handling stability is improved.
- The wheelbase is shorter and the frame head pipe is relocated to produce quick and nimble handling characteristics.
- New hexagonal aluminum rails are used on the sub-frame for lighter weight, a slimmer appearance and easier air-filter service.
- The sub-frame rails are moved inward to slim the bodywork, but are also raised to provide additional space for the larger air cleaner and the advanced BFRC shock absorber.
- Not only is the sub-frame thinner, but the all of the body work is slim to enable the RM-Z450 rider to move freely in the cockpit, especially during spirited riding.
- Inspired by the advanced suspension from the GSX-R1000R Superbike, the RM-Z450 has a new SHOWA Balance Free Rear Cushion (BFRC) shock absorber.
- The BFRC uses a separate, external damping circuit that improves the responsiveness of damping force to deliver excellent traction and better absorption over bumps.
- The fully adjustable BFRC controls damping so well during minute suspension movements that ride comfort is increased at lower speeds while stability is enhanced at higher speeds.
- New generation, improved SHOWA coil spring front fork has larger inner tubes and rod pipes for strength and durability. Front suspension tuning and maintenance is balanced and easy; a great benefit during frequent riding.
- Springs in each fork leg combine with larger, adjustable damping cylinders to deliver better response to the terrain and provide a strong feeling of control to the rider.

- The strong, RENTHAL aluminum tapered handlebar have a straighter bend that prior models to help aid the rider during aggressive maneuvering.
- A new, lighter upper fork bracket is used to complement the new front suspension and handlebars.
- To improve stopping performance and feel, a larger 270mm wave-style front brake rotor is used.
- A new design rear brake master cylinder hugs the frame beam to reduce dirt contamination and the chance of the rider's boot touching it during riding.
- To support the additional engine, braking and handling performance of the 2018 RM-Z450, the tires are updated to the race-track developed Bridgestone Battlecross X30 tires.
- The wheels feature black-anodized rims with a new cross-section design that maintains strength while reducing un-sprung weight.
- Suzuki MXGP-inspired styling has a sharper front fender and radiator shrouds blending into side covers and an upswept tail to promote the impression of speed while reducing weight and easing service.
- The functional styling and the motorcycle's trim chassis permits a variety of rider positions that facilitate control and comfort.
- A new plastic fuel tank weighs half-a-pound less than the prior model's aluminum tank. Fuel capacity is raised to 1.7 US gallons.
- The seat base, inner fenders and side covers were developed to reduce moisture and dirt from getting to the air cleaner. This helps prevent debris from contaminating the air filter element.
- The new seat is slimmer, with revised foam density to aid the rider's control of the motorcycle. The seat weighs half-a-pound less than the prior model and has a large, blue gripper panel that runs nose-to-tail on the cover.
- The Suzuki Championship Yellow bodywork is enhanced with distinctive blue and black striping and modern logo graphics.

Enlist in the RM ARMY and enjoy Suzuki Amateur Racing Support!

Suzuki's RM Army and Amateur Racing Support is top notch, offering over \$3.8 million in contingency, trackside support, and the opportunity to train with Ricky Carmichael at Suzuki's exclusive Camp Carmichael. Want to see why champions choose Suzuki? Visit racesuzuki.com for more information on Suzuki's Amateur Support Program and enlist in the RM ARMY!

Water pump impeller	8.0	0.82	5.90

Fuel System

Fastening part	Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft
Fuel tank front bolt	10	1.0	7.5
Fuel pump bolt	10	1.0	7.5
Fuel delivery pipe screw	3.5	0.36	2.60

Ignition System

Fastening part	Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft
Spark plug	11	1.1	8.5
Ignition coil bolt	10	1.0	7.5
Coupler bracket bolt	10	1.0	7.5

Starting System

Fastening part		Tightening torque		
Fastering part	N⋅m	kgf-m	lbf-ft	
Kick starter lever screw	10	1.0	7.5	
Kick starter lever bolt	29	3.0	21.5	
Kick starter guide bolt	10	1.0	7.5	
Clutch cover bolt	11	1.1	8.5	

Charging System

Fastening part	Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft
Generator stator bolt	5.5	0.56	4.05
CKP sensor bolt	5.5	0.56	4.05
Generator rotor nut	80	8.2	59.0
Generator cover bolt	11	1.1	8.5
Regulator/rectifier bolt	6.0	0.61	4.45
Engine mounting upper bracket bolt	35	3.6	26.0
Engine mounting head bolt	55	5.6	40.5

Exhaust System

Fastening part		Tightening torque		
rastening part	N⋅m	kgf-m	lbf-ft	
Exhaust pipe nut	23	2.3	17.0	
Connector bolt	17	1.7	12.5	
Muffler support front bolt	21	2.1	15.5	
Muffler support rear bolt	23	2.3	17.0	
Exhaust pipe cover bolt	11	1.1	8.5	
Rear muffler body bolt	10	1.0	7.5	

Front Suspension

Eactoning part	Tightening torque			
Fastening part	N⋅m	kgf-m	lbf-ft	
Front fork air bleeder valve	1.3	0.13	0.95	
Front fork cap bolt	76	7.7	56.0	
Front fork lower clamp bolt	23	2.3	17.0	
Front fork upper clamp bolt	23	2.3	17.0	
Front fork protector bolt	4.9	0.50	3.65	
Compression damper unit	30	3.1	22.5	
Lock-nut/center bolt	28	2.9	21.0	
Front fork center bolt	69	7.0	51.0	

Rear Suspension

Fastening part	Tightening torque		
	N⋅m	kgf-m	lbf-ft
Rear shock absorber spring adjuster lock bolt	5.0	0.51	3.70
Rear shock absorber lower nut	50	5.1	37.0
Rear shock absorber upper nut	50	5.1	37.0
Seat rail upper bolt	35	3.6	26.0
Seat rail lower bolt	35	3.6	26.0
Plug	35	3.6	26.0
Cushion lever nut	80	8.2	59.0
Cushion rod rear nut	80	8.2	59.0
Cushion rod front nut	80	8.2	59.0
Swingarm rear axle plate screw	4.5	0.46	3.35
Swingarm pivot nut	70	7.1	52.0
Rear brake master cylinder mounting bolt	10	1.0	7.5

Wheels and Tires

Fastening part	Tightening torque			
rastening part	N⋅m	kgf-m	lbf-ft	
Front axle nut	35	3.6	26.0	
Front axle pinch bolt	18	1.8	13.5	
Rear axle nut	100	10.2	74.0	
Spoke nipple (front wheel)	5.5	0.56	4.05	
Spoke nipple (rear wheel)	6.0	0.61	4.45	
Front wheel bead stopper nut	14	1.4	10.5	
Rear wheel bead stopper nut	14	1.4	10.5	

Drive Chain / Drive Train / Drive Shaft

Fastening part		Tightening torque		
i astennig part	N⋅m	kgf-m	lbf-ft	
Rear axle nut	100	10.2	74.0	
Drive chain roller lower nut	23	2.3	17.0	
Drive chain roller upper bolt	23	2.3	17.0	
Engine sprocket bolt	32	3.3	24.0	
Rear sprocket nut	30	3.1	22.5	
Engine sprocket cover bolt	11	1.1	8.5	

Brake Control System and Diagnosis

Eastoning part	Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft
Front brake lever adjuster lock-nut	5.0	0.51	3.70
Rear brake master cylinder rod lock-nut	6.0	0.61	4.45
Front brake air bleeder valve	6.0	0.61	4.45
Front reservoir cap screw	1.5	0.15	1.10
Rear brake air bleeder valve	6.0	0.61	4.45
Rear reservoir cap screw	1.5	0.15	1.10
Front brake lever pivot bolt	6.0	0.61	4.45
Front brake lever pivot bolt lock-nut	6.0	0.61	4.45
Front brake master cylinder holder bolt	10	1.0	7.5
Brake hose union bolt	23	2.3	17.0
Rear brake master cylinder mounting bolt	10	1.0	7.5
Brake pedal pivot bolt	29	3.0	21.5

Front Brakes

Eactoning part		Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft	
Front brake pad mounting pin	17	1.7	12.5	
Front brake pad mounting pin plug	2.5	0.25	1.85	
Front brake caliper mounting bolt	26	2.7	19.5	
Brake hose union bolt	23	2.3	17.0	
Front brake caliper pin A	25	2.5	18.5	
Front brake caliper pin B	28	2.9	21.0	
Front brake air bleeder valve	6.0	0.61	4.45	
Front brake disc bolt	11	1.1	8.5	

Rear Brakes

Fastening part	Tightening torque		
l astenning part	N⋅m	kgf-m	lbf-ft
Rear brake pad mounting pin	17	1.7	12.5
Brake hose union bolt	23	2.3	17.0
Rear brake air bleeder valve	6.0	0.61	4.45
Rear brake caliper pin A	43	4.4	32.0
Rear brake caliper pin B	12	1.2	9.0
Rear brake disc bolt	26	2.7	19.5

Manual Transmission

Eastoning part	Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft
Driveshaft bearing retainer screw	8.5	0.87	6.30
Countershaft bearing retainer screw	8.5	0.87	6.30
Gearshift cam bearing retainer screw	8.5	0.87	6.30
GP switch bolt	6.5	0.66	4.80
Gearshift arm stopper	23	2.3	17.0
Gearshift cam stopper bolt	10	1.0	7.5
Gearshift cam plate bolt	24	2.4	18.0
Gearshift pawl lifter screw	8.5	0.87	6.30

Clutch

Eastaning part	Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft
Clutch cable lock-nut	2.1	0.21	1.55
Clutch cable bracket bolt	7.0	0.71	5.20
Clutch lever pivot bolt	4.0	0.41	2.95
Clutch lever pivot nut	4.0	0.41	2.95
Clutch release camshaft retainer bolt	10	1.0	7.5
Clutch sleeve hub nut	90	9.2	66.5
Clutch spring bolt	10	1.0	7.5
Clutch outer cover bolt	11	1.1	8.5
Primary drive gear nut	110	11.2	81.5

Steering / Handlebar

Fastening part		Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft	
Handlebar clamp bolt	25	2.5	18.5	
Throttle case screw	3.8	0.39	2.80	
Clutch lever holder bolt	3.0	0.31	2.25	
Steering stem head nut	100	10.2	74.0	
Front fork upper clamp bolt	23	2.3	17.0	
Handle lower holder nut	45	4.6	33.5	
Steering stem nut	45 N·m (4.6 kgf-m, 33)	45 N·m (4.6 kgf-m, 33.5 lbf-ft) \rightarrow turn counterclockwise 1/4 – 1/2		
Front brake hose guide bolt	3.0	0.31	2.25	

Exterior Parts

Fastening part		Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft	
Seat bolt	10	1.0	7.5	
Radiator cover bolt	10	1.0	7.5	
Front protector bolt	12	1.2	9.0	
Frame cover bolt	10	1.0	7.5	
Front fender bolt	10	1.0	7.5	
Front number plate bolt	5.5	0.56	4.05	
Rear fender front bolt	10	1.0	7.5	

Body Structure

Eastoning part	Tightening torque		
Fastening part	N⋅m	kgf-m	lbf-ft
Footrest bracket bolt	50	5.1	37.0

Special Tools and Equipment

Fuel / Oil / Fluid / Coolant Recommendation BENJ37K10308001

Fuel

NOTICE

Do not use leaded gasoline. If it is used, the engine will be damaged.

For U.S.A. and Canada

Use unleaded gasoline with an octane rating of 90 AKI or higher.

Unleaded gasoline containing up to 10% ethanol by volume may be used.

For other countries

Use unleaded gasoline with an octane rating of 95 RON or higher.

Unleaded gasoline containing up to 10% ethanol by volume may be used. (if E10 label is attached)

Engine Oil

Use engine oils which meet the following requirements.

	Engine oil
API service	SG, SH, SJ, SL, SM or SN
classification	36, 311, 33, 3L, 314 01 314
JASO T903 standard	MA
Viscosity	SAE 10W-40

If SAE 10W-40 engine oils are not available, select oils of an appropriate viscosity grade according to the following chart.

IF04K1030001-01

Suzuki does not recommend the use of engine oils which have an "ENERGY CONSERVING" or "RESOURCE CONSERVING" indication in the API service symbol for any of its motorcycles / ATVs. They can affect the engine life and the clutch performance.

ID26J1030005-01

For U.S.A.

Suzuki recommends the use of SUZUKI PERFORMANCE 4 MOTOR OIL or SUZUKI ECSTAR OIL SUPER DELUXE.

Brake Fluid Specification and classification: DOT 4

A WARNING

Since the brake system of this motorcycle is filled with a glycol-based brake fluid by the manufacturer, do not use or mix different types of fluid such as silicone-based and petroleum-based fluid for refilling the system, otherwise serious damage will result.

Do not use any brake fluid taken from old or used or unsealed containers.

Never reuse brake fluid left over from a previous servicing, which has been stored for a long period.

Engine Coolant

Suzuki recommends the use of SUZUKI LONG LIFE COOLANT or SUZUKI SUPER LONG LIFE COOLANT.

Coolant 99000–99032–12X (SUZUKI LONG LIFE COOLANT (GREEN)) Coolant 99000–99032–20X (SUZUKI SUPER LONG LIFE COOLANT (BLUE))

For SUZUKI LONG LIFE COOLANT

NOTICE

- Use a high quality ethylene glycol base anti-freeze, mixed with distilled water. Do not mix an alcohol base anti-freeze and different brands of anti-freeze.
- Do not put in more than 60% anti-freeze or less than 50%. (Refer to Fig. 1 and 2.)

The 50:50 mixture of distilled water and ethylene glycol anti-freeze will provide the optimum corrosion protection and excellent heat protection, and will protect the cooling system from freezing at temperatures above -31 °C (-24 °F).

If the vehicle is to be exposed to temperatures below – 31 °C (–24 °F), this mixing ratio should be increased up to 55% or 60% according to the figure.

Anti-freeze Proportioning Chart

Anti-freeze density	Freezing point
50%	–31 °C (–24 °F)
55%	–40 °C (–40 °F)
60%	–55 °C (–67 °F)

Fig.1: Engine coolant density-freezing point curve

Fig.2: Engine coolant density-boiling point curve

I310G1160002-01

For SUZUKI SUPER LONG LIFE COOLANT

NOTICE

- Ethanol or methanol base coolant or water alone should not be used in cooling system at any time as damage to cooling system could occur.
- Do not mix the distilled water, SUZUKI LONG LIFE COOLANT (coolant color: Green) or equivalent.

SUZUKI SUPER LONG LIFE COOLANT will provide the optimum corrosion protection and excellent heat protection, and will protect the cooling system from freezing at temperatures above –36 °C (–33 °F).

Anti-freeze concentration table

Anti-freeze density	Freezing point
50%	–36 °C (−33 °F)

Water for mixing

Use distilled water only. Water other than distilled water can corrode and clog the aluminum radiator. For engine coolant mixture information, refer to "Engine Coolant" (Page 0C-11).

NOTICE

Mixing of anti-freeze/engine coolant should be limited to 60%. Mixing beyond it would reduce its efficiency. If the anti-freeze/engine coolant mixing ratio is below 50%, rust inhabiting performance is greatly reduced. Be sure to mix it above 50% even though the atmospheric temperature does not go down to the freezing point.

Anti-freeze / Engine coolant

The engine coolant perform as a corrosion and rust inhibitor as well as anti-freeze. Therefore, the engine coolant should be used at all times even though the atmospheric temperature in your area does not go down to freezing point.

Suzuki recommends the use of SUZUKI COOLANT antifreeze/engine coolant. If this is not available, use an equivalent which is compatible with an aluminum radiator.

Front Fork Oil

Use SHOWA SUSPENSION FLUID SS-19.

Fork oil (SHOWA SUSPENSION FLUID SS-19)

Rear Shock Absorber Oil

Use SHOWA SUSPENSION FLUID SS-25.

Rear suspension oil (SHOWA SUSPENSION FLUID SS-25)
